

\$PEPD & \$mETH

WHITEPAPER

Version 1.0

Abstract

Pepedose introduces a revolutionary Layer 2 blockchain called MethChain, designed to enhance Ethereum's scalability, reduce transaction costs, and optimize staking rewards.

MethChain's native token, mETH, powers the ecosystem, providing users with fast, low cost transactions while maintaining Ethereum's security.

By staking \$Pepedose on Ethereum, users gain access to rewards in mETH on MethChain.

This ecosystem merges memecoin culture with cutting edge blockchain infrastructure to offer a scalable, cost effective, and community driven network.

In this market, I don't just invest; I control the flow. When I enter, the value follows.

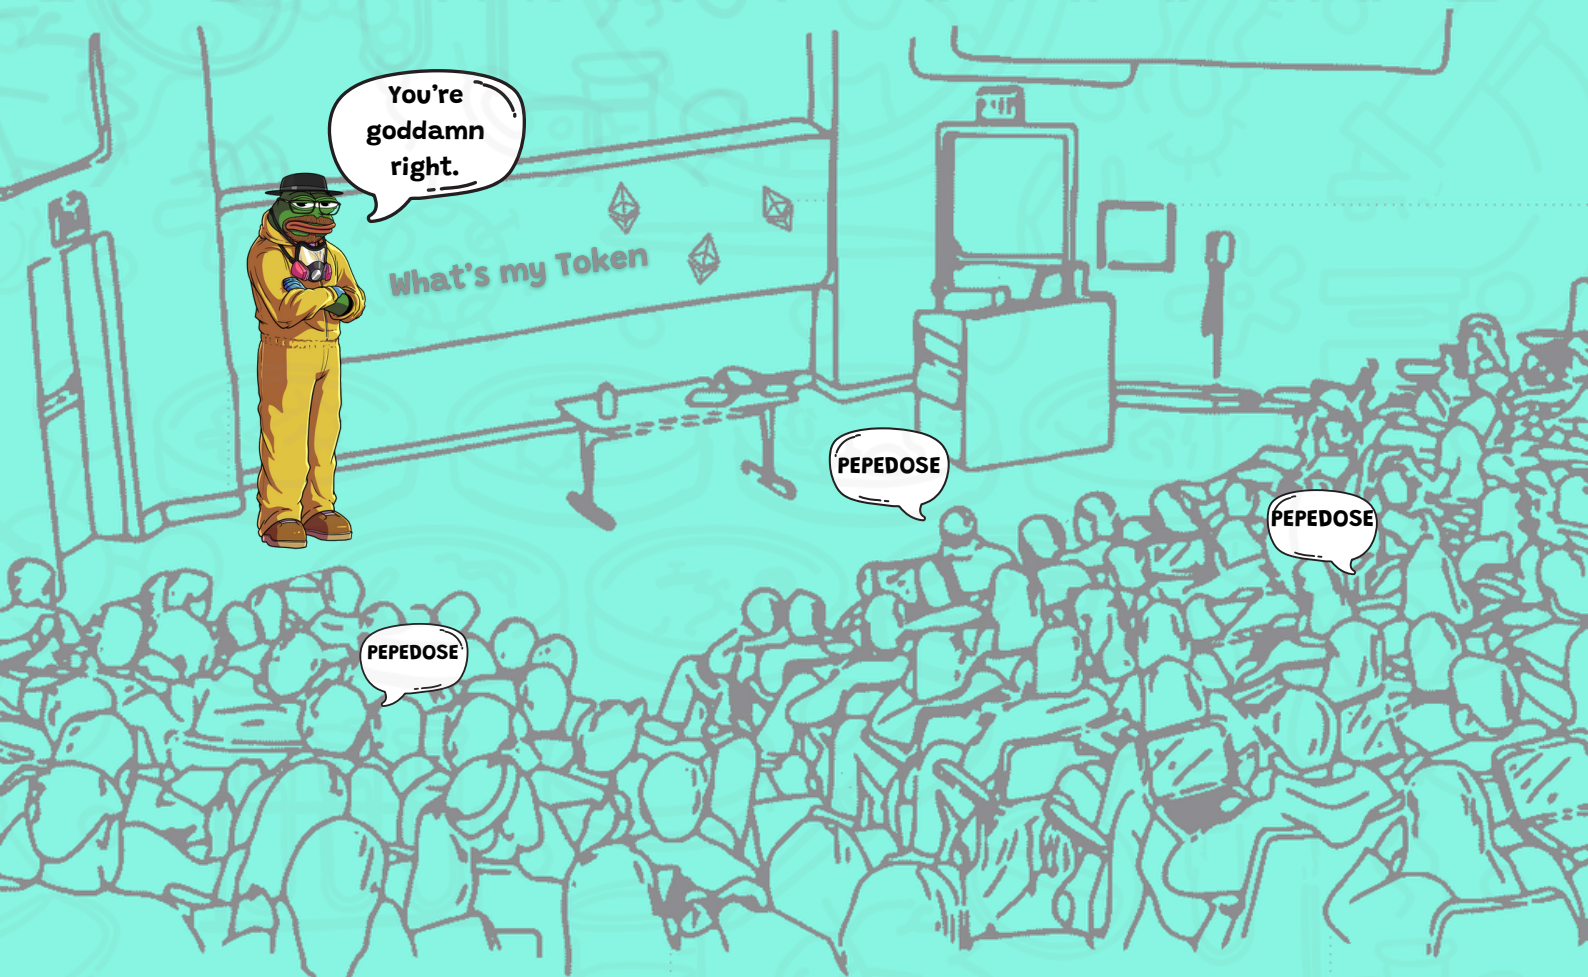

The Legend of METH

In a world of fleeting meme coins and hollow promises, one project rose above the noise METH. Born from the unrelenting genius of Pepe Walter and the fiery determination of Jeppe, this wasn't just another token, it was a revolution.

Inspired by the unstoppable force of Breaking Bad, they knew success wasn't built on luck. It required grit, vision, and, most importantly, a strong team. Alone, they were talented. Together, they were unstoppable.

They didn't settle for mediocrity. They didn't chase trends. They harnessed the power of the Layer 2 technology so potent, so refined, it outclassed everything the crypto world had ever seen. METH scalable, fast, and pure.

This isn't just a story. It's a movement.
Join the legacy.

The Power of the Formula:

\$PEPD + METH

PepeDose is a revolutionary crypto project that combines blockchain innovation with cutting edge trading strategies. The \$PEPD token uses advanced algorithms for real time market analysis, maximising trading potential by learning and adapting to market trends. By owning \$PEPD, users also earn METH, a powerful token that offers fast transactions, low fees, and endless opportunities in DeFi. Together, \$PEPD and METH create a powerful formula for financial success, merging blockchain technology to redefine wealth building in crypto. Ready to join the future?

I'm no crypto expert, but I know a solid investment when I see it.

Mechanism Design

Pepedose's integration with MethChain offers users the ability to stake, earn, and transact efficiently while benefiting from Ethereum's security.

Stake Pepedose on Ethereum: Users stake \$Pepedose on the Ethereum mainnet.

Earn mETH on MethChain: Stakers receive mETH rewards on MethChain, reducing gas costs and allowing for instant transactions.

Utilize mETH: Users can transact, stake, or use mETH within MethChain's DeFi ecosystem.

Bridge Mechanism: Users can bridge mETH back to Ethereum as needed, providing interoperability between Layer 1 and Layer 2.

I am not just an investor, I am the market. When I make a move, the price follows.

Protocol Goals

Memecoin Integration: \$Pepedose combines meme culture with real utility, attracting a younger demographic.

Governance: Community governance via DAO, allowing token holders to vote on protocol decisions.

Community Engagement: Regular calls, reward mechanisms, and decentralized moderation.

Market Opportunity: With the yield farming market expanding, Pepedose targets meme savvy users while offering robust DeFi tools. It bridges entertainment and functionality, appealing to both newcomers and veterans.

I don't need all the answers right now, but I know one thing, if we stay smart and patient, the profit will come.

Dose-nomics

Tokenomics:

Total Supply and Allocation:

Total Supply: 200,000,000,000 \$Pepedose tokens.

Allocation:

- **Community Rewards(Staking): 30% (Staking incentives).**
- **Development Fund: 7.5% (Used for smart contract audits, partnerships, and infrastructure development).**
- **Presale: 30% (To fund the initial development and marketing of MethChain).**
- **Marketing: 20% (For marketing purposes to ensure project rapid Growth).**
- **Liquidity: 12.5% (liquidity to provide for CEX and DEXlistings).**

I'm the guy who's gonna make you profit but first, I need you to stake a little something for me.

- Burn Mechanism:

- PepeDose tokens will be burned periodically, with scheduled burns occurring twice a year. This approach reduces the total supply over time, creating deflationary pressure and driving long term value for token holders. Each burn event will be announced in advance to ensure transparency and community engagement.

- Treasury Allocation:

- Treasury allocation managed by community governance to fund future protocol improvements, integrations, and marketing initiatives.

I believe patience, in the right amount, is a powerful strategy.

Security

PepeDose's smart contracts will undergo rigorous audits by top tier security firms to ensure safety and reliability. Additionally, the protocol incorporates on chain monitoring to detect and mitigate suspicious activity. This attention to detail reflects the founders' resolve to ensure a secure and transparent environment.

Smart contracts generally must pass audits and on chain monitoring to ensure security and reliability.

Yeah, blockchain! But, like, the legit kind.

Road Map

Step 1 2025: Protocol Development

- Develop Ethereum staking contracts and reward distribution model.
- Launch \$Pepedose on Ethereum as an ERC 20 token.
- Conduct a presale to fund the development of MethChain.

Step 2 2025: Protocol Development

- Conceptualize MethChain's Layer 2 architecture.
- Develop Ethereum staking contracts and reward distribution model.

Step 3 2024: MethChain Testnet Release

- Deploy the MethChain testnet and initiate validator onboarding.
- Implement the staking contract connecting Ethereum to MethChain.

Step 4 2024: Mainnet Launch & DeFi Integrations

- Launch MethChain mainnet and enable METH staking rewards.
- Integrate with key DeFi protocols.

Step 5 2025: Governance and DAO Formation

- Establish the framework for decentralized governance.
- Enable community driven proposals for network improvements.

Conclusion

PepeDose is poised to redefine the boundaries of memecoin culture and DeFi innovation. Join us as we build a sustainable and fun ecosystem on Ethereum. Farm \$PepeDose, earn mETH, and become part of the future of decentralized finance. The legacy continues don't be the one left in the dust. Hop on the Pepedose van so you don't miss on the ride of a lifetime! Let's get cooking

You can't keep missing out on these gains!
